Smart Life

Why is the device offline after a successful connection?

If there is an offline situation, please check it according to the following methods:

1. Please check whether the equipment is normally energized.
2. Whether the equipment has been off power or off the network, such as broken link, there is a process for online, please confirm whether the display is online after 2–3 minutes.
3. Please check whether the network where the equipment is located is stability: put your phone or Ipad in the same network, and put it next to the device, try to open the web page.
4. Please confirm whether the home Wi-Fi network is normal or have modified Wi-Fi name, password etc., if any, also need to reset the device and re-add.
5. If the network is working, but the device is still offline, please confirm whether there are too many Wi-Fi connections. You can try to restart the router, power the device again after power off, and then wait for 2–3 minutes to see if the device can be online.

If all the above has been eliminated and there is still a problem, it is recommended to remove the device and re-add. If there is still a problem please select the device in the APP user feedback and submit feedback, we will submit to technicals to inquiry reasons.
